

Upgrade kit XPro to Dataman-40Pro

Description

The **XPro to Dataman-40Pro Upgrade Kit** allow the specialized programmer MEMPro, T51Pro and PIKPro have all features of universal programmer Dataman-40Pro.

The XPro to Dataman-40Pro Upgrade Kit is designated for users of **T51Pro**, **PIKPro** and **MEMPro** programmers, for which is insufficient the range of supported devices of their specialized programmers.

The operation of the upgrade of MEMPro/T51Pro/PIKPro programmer into **Dataman-40Pro** consist of the insertion of the **XPro to Dataman-40Pro Upgrade pod** into the connector on the board of the upgraded programmer (by detailed how-do-it manual). This operation can be done by programmer's user directly (there is not needed to perform upgrade in the Dataman service center).

Important notes:

- the warranty of the MEMPro/T51Pro/PIKPro programmer is not increased to Dataman-40Pro warranty by installing of this **XPro to Dataman-40Pro Upgrade Kit**.
- the warranty of the MEMPro/T51Pro/PIKPro programmer is not affected by installing the **XPro to Dataman-40Pro Upgrade**, but the damage of programmer during self-installation is - of course - not covered by warranty.

Specification

Limitations

- kit is applicable to MEMPro, T51Pro and PIKPro programmers only

XPro to Dataman-40Pro Upgrade Kit contains

- XPro to Dataman-40Pro Upgrade pod
- sticker "Upgraded to Dataman-40Pro"
- installation manual

Installation Manual

- remove supply and USB cables from the programmer
- place the programmer on the bench in such a way that the ZIF socket lever points to you
- unscrew the two screws from the bottom edge of the front side of the programmer, the screws store in a box
- turn the programmer so, that the connectors may point to you
- unscrew the two screws from the upper edge of the rear side of the programmer, the screws store in a box (use - preferable - the same box ;-))
- turn the programmer so, that the ZIF socket lever points to you
- move the ZIF socket lever to the upper position
- carefully lift the upper cover of the programmer

Recommended procedure: Push your right hand thumb against the ZIF socket and lift up the cover by fingers resting on the front side of the programmer. Be careful, because close to the left edge of the upper cover there is a faston with an earthing cable connected!

- turn the upper cover of the programmer left of the programmer and put it on the bench upside down
- insert the XPro Upgrade pod into the connector on the programmers board (see pictures for more details)

- shut the upper cover by tilting it down on the programmer. Check the LED and the YES button for correct position!
- screw on the two screws at the bottom edge of the programmer front face
- turn the programmer so, that connectors point to you
- screw on the two screws at the back side of the programmer
- place the sticker "Upgraded to Dataman-40Pro" over the MEMPro/T51Pro/PIKPro stamp
- insert USB and supply cables into the programmer
- run **PG4UW** control software and let it to find Dataman-40Pro programmer to finish upgrade XPro to Dataman-40Pro programmer
